

REGULATORY VALIDATION

TRANSFUSION & DONOR

INDEPENDENT VALIDATION

Our team has been performing validations on every major blood bank computer system for over 25 years. Our process is designed to save you time. We perform all validation related activities and provide detailed regulatory compliant documentation for your review. Our final report is designed for simple review with your team, directors, and auditors.

Clear, thorough, and compliant. Just like your team. Experience matters. Change doesn't have to be a Challenge.

Risk Assessment

Worst-case scenario testing by trained medical technologists. We target the areas of your system with highest risk to patient safety.

User Requirements

User Requirement Specifications ensure process and safety checks function as expected in your Donor or Transfusion system.

Customized Plans

Database review allows our consultants to customize test plans to your workflow and unique system usage.

**Cerner
Millenium®**

**MAK
P.H.S.
ePROGESA**

**SCC
SoftBank®
SoftDonor™**

**Haemonetics
SafeTrace Tx®**

Sunquest (Clinisys™)

**GPI-USA
e-Delphyn® Donor
ElDorado® Donor**

**WellSky®
Transfusion
Donor**

How we work:

We work remotely with little impact on your daily activities. Our priorities are quality, compliance and patient safety, but we also understand that our work is just a small piece of what makes your laboratory run.

That's why we provide:

- Documentation that is thorough and easy to review.
- Open documents that can be reused, or used for training.
- Support for code version validation.

Whether you use BC Solutions to perform OQ validation, pre-validation review and testing or work with our Consultants to test workflows and interfaces, or rely on us to support your ongoing Compliance Program, we are committed to finding the solution that works for your team.

Your patients, donors, and clients expect personal care from you. Our clients expect the same from us.

**Experience Matters.
Change doesn't have to be a Challenge.**
